masa atómica o número másico del isótopo más estable — 55.845
1.ª energía de ionización en kJ/mol — 762.5
número atómico — 26
electronegatividad — 1.83
símbolo químico — Fe
nombre — Hierro
configuración electrónica — [Ar] $3d^6\ 4s^2$
estados de oxidación más comunes están en negrita — +6 +5 +4 +3 +2 +1 **−1** −2

- metales alcalinos
- alcalinotérreos
- otros metales
- metales de transición
- lantánidos
- actínidos
- metaloides
- no metales
- halógenos
- gases nobles
- elementos desconocidos
- masas de elementos radiactivos entre paréntesis

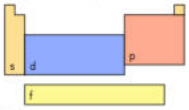
Bloques de configuración electrónica



Notas

- 1 kJ/mol ≈ 96.485 eV.
- Todos los elementos tienen un estado de oxidación implícito cero.
- Los estados de oxidación de los elementos 109,110, 111,112,113,114,115,116,117 y 118 son predicciones.
- Las configuraciones electrónicas de los elementos 105, 106,107,108,109,110,111,112,113,114,115,116,117 y 118 son predicciones.

masa atómica o número másico del isótopo más estable — 55.845
1.ª energía de ionización en kJ/mol — 762.5
número atómico — 26
electronegatividad — 1.83
símbolo químico — Fe
nombre — Hierro
configuración electrónica — [Ar] $3d^6\ 4s^2$
estados de oxidación más comunes están en negrita — +6 +5 +4 +3 +2 +1 **−1** −2

- metales alcalinos
- alcalinotérreos
- otros metales
- metales de transición
- lantánidos
- actínidos
- metaloides
- no metales
- halógenos
- gases nobles
- elementos desconocidos
- masas de elementos radiactivos entre paréntesis

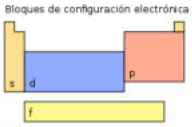
Bloques de configuración electrónica



Notas

- 1 kJ/mol ≈ 96.485 eV.
- Todos los elementos tienen un estado de oxidación implícito cero.
- Los estados de oxidación de los elementos 109,110, 111,112,113,114,115,116,117 y 118 son predicciones.
- Las configuraciones electrónicas de los elementos 105, 106,107,108,109,110,111,112,113,114,115,116,117 y 118 son predicciones.
